

BUILT FOR WHAT OTHERS WON'T TOUCH

We're not Your Typical Contractor, and That's by Design

Premium Services brings certified crews, specialized equipment and unmatched safety standards to utility, energy and industrial projects. From concrete, asphalt and excavation to substation restoration and metal building erection, we take on the scopes that demand experience, speed and zero tolerance for shortcuts.

Safety is the Standard

We're a construction company led by a safety-first mindset. That's why we're certified through several recognized organizations and staff every job with trained crews and internal HSE oversight.

Concrete & Asphalt

Premium Services isn't your average concrete and asphalt contractor. Our crews are held to some of the highest internal safety standards in the industry. We believe the job isn't done right unless it's done safely.

Hard & Soft Surface Restoration

When utility projects, infrastructure upgrades or heavy construction jobs damage roads, yards, sidewalks or paved surfaces, Premium Services is called in to finish the job right. We specialize in hard surface restoration, bringing back concrete, asphalt and curbing to spec.

Metal Building Erection

When you need a metal building that goes up fast and stands the test of time, you need more than a crew with tools. You need a partner who knows how to plan, execute, and protect your investment from day one.

Underground & Utilities

Underground work is unforgiving, and not everyone's equipped to do it properly. We bring the experience, equipment and internal safety protocols that utility contractors and engineering firms demand.

Specialty Work

We tackle unique, high-risk, or highly specialized scopes that other contractors can't handle. From energy regulator station builds to hydro excavation, confined space entry and emergency response, we bring the equipment, training and flexibility to get it done safely.

Fencing

Premium Services delivers fencing systems built to secure and define high-value assets. From temporary to chain link and high-security options, we install fencing that meets project specs and safety codes.
